Tissue 1: Human blood

Which sample is the tumor? (circle one)  A  B

Other observations/unique features of these tissues:

Tissue 2: Liver

Which sample is the tumor? (circle one)  A  B

Other observations/unique features of these tissues:

Tissue 3: Kidney

Which sample is the tumor? (circle one)  A  B

Other observations/unique features of these tissues:

Tissue 4: Colon

Which sample is the tumor? (circle one)  A  B

Other observations/unique features of these tissues:
**General Questions:**

1) Were there any general defining features of the normal tissues?

2) Were there any general defining features of the cancerous tissues?

3) Was the difference between normal tissue and cancerous tissue what you expected it to be?
