CPR² on Flow Charts

Concept 1:
- Organizing visualizing more to be done possibly locating areas of uncertainty to be asked about before starting.

Process:
- Creating icons that can be used and understood multiple times.

Result:
- The 2 labs look very different even though I didn’t intend them to be. Possibly the nature of the work. Both used icons invented for the first one.

Reflections/Attitudes:
- I didn’t want to do them but I did feel ready to do the labs and make fewer mistakes now. Identified 2 areas where clarification is needed.

Science short-hand:
- Why did the 2nd lab not contain to my flow chart?

Make this more of my process for students.
